## Instructions

There are two sections in this examination paper.

| Section A | Concepts and Skills | 150 marks | 6 questions |
| :--- | :--- | :--- | :--- |
| Section B | Contexts and Applications | 150 marks | 3 questions |

Answer all nine questions, as follows:
In Section A, answer all six questions
In Section B, answer:
Question 7
Question 8
either Question 9A or Question 9B.

Write your answers in the spaces provided in this booklet. There is space for extra work at the back of the booklet. You may also ask the superintendent for more paper. Label any extra work clearly with the question number and part.

The superintendent will give you a copy of the booklet of Formulae and Tables. You must return it at the end of the examination. You are not allowed to bring your own copy into the examination.

Marks will be lost if all necessary work is not clearly shown.

Answers should include the appropriate units of measurement, where relevant.

Answers should be given in simplest form, where relevant.

Answer all six questions from this section.

## Question 1

The events $A$ and $B$ are such that $P(A)=0.7, P(B)=0.5$ and $P(A \cap B)=0.3$.
(a) Find $P(A \cup B)$

(b) Find $P(A \mid B)$

(c) State whether $A$ and $B$ are independent events, and justify your answer.

The shapes of the histograms of four different sets of data are shown below.

## Question 3

The co-ordinates of three points $A, B$, and $C$ are: $A(2,2), \quad B(6,-6), \quad C(-2,-3)$.
(See diagram on facing page.)
(a) Find the equation of $A B$.

(b) The line $A B$ intersects the $y$-axis at $D$.

## Question 7

Probability and Statistics
(50 marks)
An economics student is interested in finding out whether the length of time people spend in education affects the income they earn. The student carries out a small study. Twelve adults are asked to state their annual income and the number of years they spent in full-time education. The data are given in the table below, and a partially completed scatter plot is given.

(i) The last three rows of data have not been included on the scatter plot. Insert them now.
(ii) Calculate the correlation coefficient.

Answer:

(iii) What can you conclude from the scatter plot and the correlation coefficient?

## Problem 3:

Two surveyors want to find the height of an electricity pylon. There is a fence around the pylon that they cannot cross for safety reasons. The ground is inclined at an angle. They have a clinometer (for measuring angles of elevation) and a 100 metre tape measure. They have already used the clinometer to determine that the ground is inclined at $10^{\circ}$ to the horizontal.
(a) Explain how they could find the height of the pylon.

Your answer should be illustrated on the diagram below. Show the points where you think they should take measurements, write down clearly what measurements they should take, and outline briefly how these can be used to find the height of the pylon.

## Diagram:

A car rental company has been using Evertread tyres on their fleet of economy cars. All cars in this fleet are identical. The company manages the tyres on each car in such a way that the four tyres all wear out at the same time. The company keeps a record of the lifespan of each set of tyres. The records show that the lifespan of these sets of tyres is normally distributed with mean 45000 km and standard deviation 8000 km .
(i) A car from the economy fleet is chosen at random. Find the probability that the tyres on this car will last for at least 40000 km .

(ii) Twenty cars from the economy fleet are chosen at random. Find the probability that the tyres on at least eighteen of these cars will last for more than 40000 km .

(iii) The company is considering switching brands from Evertread tyres to SafeRun tyres, because they are cheaper. The distributors of SafeRun tyres claim that these tyres have the same mean lifespan as Evertread tyres. The car rental company wants to check this claim before they switch brands. They have enough data on Evertread tyres to regard these as a known population. They want to test a sample of SafeRun tyres against it.

The company selects 25 economy cars at random from the fleet and fits them with the new tyres. For these cars, it is found that the mean life span of the tyres is 43850 km .
Test, at the $5 \%$ level of significance, the hypothesis that the mean lifespan of SafeRun tyres is the same as the known mean of Evertread tyres. State clearly what the company can conclude about the tyres.

(a) Prove that, if two triangles $\triangle A B C$ and $\triangle A^{\prime} B^{\prime} C^{\prime}$ are similar, then their sides are proportional, in order:

$$
\frac{|A B|}{\left|A^{\prime} B^{\prime}\right|}=\frac{|B C|}{\left|B^{\prime} C^{\prime}\right|}=\frac{|C A|}{\left|C^{\prime} A^{\prime}\right|} .

(b) Anne is having a new front gate made and has decided on the design below.

The gate is 2 metres wide and 1.5 metres high. The horizontal bars are 0.5 metres apart.
(i) Calculate the common length of the bars $[A F]$ and $[D E]$, in metres, correct to three decimal places.

(ii) In order to secure the bar $[A F]$ to $[D E]$, the manufacturer needs to know:

- the measure of the angle $E G F$, and
- the common distance $|A G|=|D G|$.

Find these measures. Give the angle correct to the nearest degree and the length correct to three decimal places.
